

# DT SERIES

Professional Power Amplifier

DT series of professional touring amplifiers are designed with the ultimate goal of achieving unmatched performance and outstanding reliability. The DT series is available in eight different models with various channels and power alternatives, each comprises of efficient zero-temperature-difference temperature control, functional limiter designed for low distortion, and complemented by precise detection and protection control. Built based on proven technology and comprehensive protection circuits, it allows for more efficient use, especially under harsh working conditions.

## ■ FEATURES

- Innovative amplifying circuit and high power supply system ensure efficient output level strongly based on sound quality.
- The whole machine adopts SMT process, larger area adopts 4-layer circuit board design.
- DT series with comprehensive and reliable protection system including short circuit protection, overload protection, DC protection, overheat protection, limiter protection and soft startup to ensure the sound system more safe and reliable.
- Unique voltage - current - temperature management system for more stable system operation.

Three optional sensitivity can flexibly match with different systems.

With three input cascaded switches, the input terminals of adjacent channels can be flexibly used in parallel, simplifying input wiring for large applications.

XLR input, signal connection socket, NL4 output socket.

Accurate and intuitive status indicator and independent volume knob of front panel, working status and operation are easily controlled.
